## 1.0 PURPOSE

The purpose of this document is to define the configurations associated with the EC135 Cable Cutters Kits and associate these configurations with the several EC135 model variants. The top assembly is defined on drawing 647.7300, EC135 Cable Cutters Kit. This Manufacturing Process Procedure (MPP) will define the sub-assemblies as well as the sub-sub-assemblies for each configuration. This is the minimum partitioning that coincides with customer requests in the aftermarket business.

## 2.0 SCOPE

This document works in parallel with the assembly drawing 647.7300 Revision C. As new EC135 variants are created, both documents will be updated. The drawing 647.7300 will reflect the top assembly only and this MPP will define all of the separate assemblies. This MPP will be called out on the drawing 647.7300.

## 3.0 CONFIGURATION STRATEGY

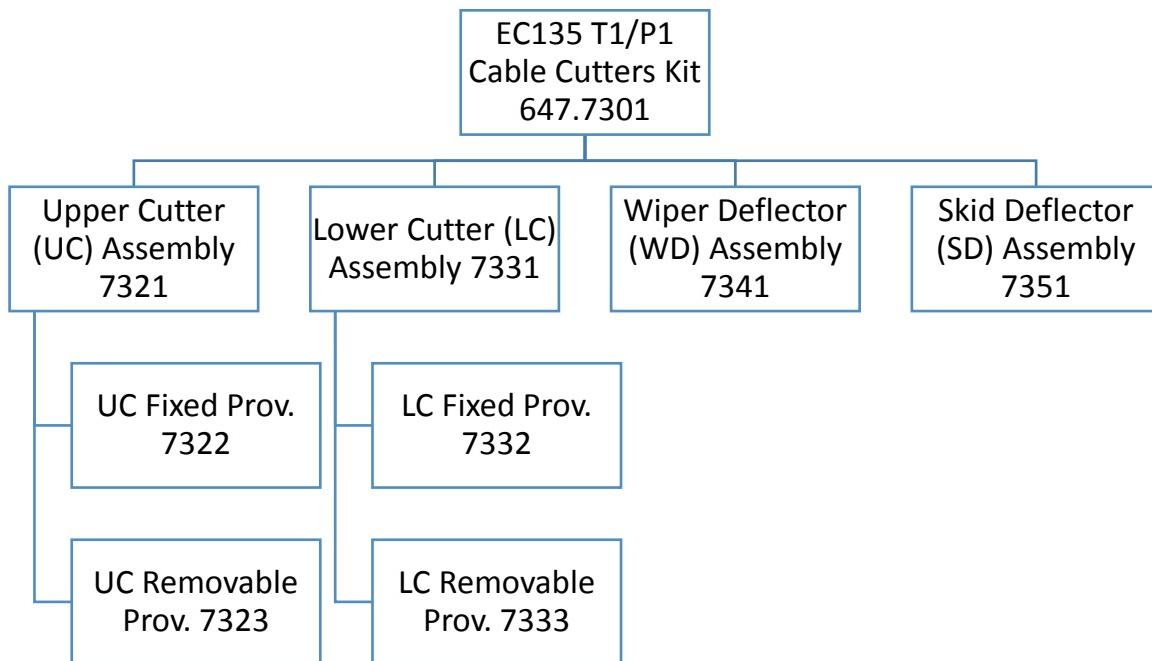

The configuration strategy for the EC135 Cable Cutters Kit is based on two configuration options: the “Sub Assembly” method, and the “Fixed/Removable” method. First, there is a top assembly that includes all of the sub-assemblies (Upper Cutter, Lower Cutter, Wiper Deflector, and Skid Deflector Assemblies). Each sub-assembly is further divided into sub-sub-assemblies for Fixed Provisions and Removable Provisions. Figure 1 displays this strategy for the EC135 model T1/P1 variants. Figure 3 displays the configurations for the T2/P2 variants, and Figure 5 displays the configurations for the T3/P3 variants.

The second configuration option is the legacy method for sub-dividing the Cables Cutters Kits into a top assembly, a fixed provisions kit for the top assembly, and a removable provisions kit for the top assembly. Figure 2 displays this configuration for the EC135 model T1/P1 variants, Figure 4 displays this configuration for the EC135 T2/P2 variants, and Figure 6 displays the configurations for the T3/P3 variants.

**Figure 6: EC135 T3/P3 Cable Cutters Kit Configuration, Fixed/Removable Method**

Table 1 summarizes each of the configurations associated with the 647.7300 drawing. The column “Callout Location” defines the location of the formal configuration definition. Note that the Lower Cutter Assembly (fixed and removable) is common to each variant of the EC135. The Wiper Deflector Assembly (fixed and removable) and the Skid Deflector Assembly (fixed and removable) are common among the T2, P2, T3, P3 variants.

## 4.0 BILLS OF MATERIAL, SUB-ASSEMBLY METHOD

The drawing 647.7300 shows the top assembly bills of material for each major configuration (647.7301, 647.7304, and 647.7307). The following tables separate the top assemblies into the sub-assemblies and sub-sub-assemblies as described above. The find numbers coincide with the drawing callouts. Material and Specification callouts can be found on the drawing.

## 5.0 BILLS OF MATERIAL, FIXED/REMOVABLE METHOD

The drawing 647.7300 shows the top assembly bills of material for each major configuration (647.7301, 647.7304, and 647.7307). The following tables separate the top assemblies into the fixed and removable provisions kit as described above. The find numbers coincide with the drawing callouts. Material and Specification are provided as well. The major configurations are provided for clarity.
